Batent No. 6783961

GENERAL INPORMATION:
APPLICANT: Dunas Milne Edwards, J.B.
APPLICANT: Dunas Milne Edwards, J.B.
APPLICANT: Duclert, A.
APPLICANT: Giordano, J.Y.
TILLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
Patent No. 6783961
FILE REFERENCE: 59.US2.REG
CURRENT APPLICATION NOWBER: US/09/513,999C
CURRENT FILING DATE: 2000-02-24
PRIOR APPLICATION NUMBER: US 60/122,487

```
C. The invention relates to high mobility group (HMG) protein comprising DNA binding motifs termed HMG A box and HMG B box. HMG A box or a non-actuaring HMG A box inhibits the release of a pro-inflammatory cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by convention of an inflammatory cytokine cascade such as endotoxic shock, rheumatoid arthritis, appendictis, peptic or duodenal ulcers, Crohn's disease, peritonitis, hepatitis, asthma, allergy, immune complex disease, sinusitis, amochiatis, emphysema, HIV infection, candidiasis, malaria, filariasis, amochiatis, dermatitis, atherosclerosis, Alzheimer's disease, myocarditis, myocarditis, moniptitis, multiple sclerosis, gout, cerebral infarction, neuritis, Goodpasture's syndrome, graft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is HMGI (also termed as HMGBI) B box found in human, mouse and rat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Tracey KJ;

WPI; 2004-420625/39.

New pharmaceutical composition comprises a polypeptide comprising an HMGB B box or its functional variant, useful for stimulating or increasing an immune response in an individual or for treating cancer in an individual.

New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.

SEQ ID NO 5; 113pp; English.

Claim 32;

The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that

Disclosure; SEQ ID NO 5; 68pp; English.

The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide CCCCXSXLLLXBXBXBXBXBXBXXBXXBXXBXBXBXCCCCCXSXCCCCCX

ö Human, mouse, high mobility group box 1 B box; HMGB1 B box, HMGB, thMGB A box; HMGB B box; proinflammatory cytokine; weight loss; obesity; inflammation; inflammation; vertex allograft rejection; rheumation; inflammation; upper adult respiratory distress syndrome; chronic obstructive pulmonary disease; psoriasis; pancreatitis; chronic, myocardial ischaemia; organic ischaemia; repartusion ischaemia; Behcet's disease; graft-versus-host disease; Crohn's disease; ulcerative colitis; multiple sclerosis; cachexia; rat. immunostimulation; and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human/mouse/rat high mobility group box 1 (HMG1) B box protein sequence that can be used to stimulate cytokine activity and increase immune response to assist in treating disease. 9 9 1 NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMMNNTAADDKQPYEKKAAKLK 1 NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMWNNTAADDKQPYEKKAAKLK Gaps comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of .; 0 Human/mouse/rat high mobility group box 1 (HMGB1) B box protein. specifically bind to the HWGB B box but do not specifically bind to non-B box epitopes of HMGB, where the antibodies can inhibit release of a proinflammentory cytokine from a cell treated with HMGB, a method for effecting weight loops or treating obseity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obseity in a patient comprises administering to the patient an amount of the polypeptide. The polypeptide, antibodies, composition and methods are useful in treating obseity and conditions characterised by activation of an inflammatory cytokine cascade, e.g. sepais, allograft rejection, rheumatoid arthritis, asthma, luques, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritonitis, burns, myocardial ischaemia, organic ischaemia, reperfusion peritonitis, multiple sclaresis or cachexia. This sequence ulcarative a human/mouse/rat HMGBI B box polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   w pharmaceutical composition comprises a polypeptide comprising an HMGB box or its functional variant, useful for stimulating or increasing an mune response in an individual or for treating cancer in an individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cytostatic; gene therapy; vaccine; pharmaceutical composition;

The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinfiammarory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to non-B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.
functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immunostimulation; and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human high mobility group box 1 (HMGI) B box biologically active fragment.
                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              syndrome;

ceffecting weight loss or treating obesity in a patient, a method for effecting weight loss or treating obesity in a patient, a method of detecting weight loss or treating obesity in a patient, a method of detecting whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TNF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the polypeptide. The polypeptide, antibodies, composition and methods are useful in treating obesity and conditions characterised by activation of an inflammatory cytokine cascade, e.g. sepsis, allograft rejection, rheumatoid arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease psoriasis, pancreatitis, chronic obstructive pulmonary disease psoriasis, pancreatitis, chronic obstructive pulmonary disease, psoriasis, can including burns, myocardial ischaemia, organic ischaemia, reperfusion ischaemia, Behcet's disease, graft-versus-host disease, Crohn's disease, ulcerative colitis, multiple sclerosis or cachexia. This sequence represents a human HMGB B box polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMWNNTAADDKQPYEKKAAKLK 60

Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its immunosuppressive fragment.

The invention is based on the discovery that high mobility group box protein 1 (HMGB1, also known as high mobility group-1 or HMG1), when administered with an antigen, diminishes the antibody response to the administered antigen. HMGB1 has 2 DNA binding motifs, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, or an immunosuppressive fragment of the vertebrate or non-ratural HMGB A box. The immune cell fragment of the vertebrate or non-ratural HMGB A box. The immune action into the pathology is induced by the administration of a non-human antigen, non-adjuvant to the individual, by the transplantation of an organ into the individual, by the transplantation of an organ into the individual, by the transplantation of an organ into the individual or by infection from a microorganism. Claimed methods of protecting a subject against an immune pathology, inhibiting an immune pathology in an individual or decreasing an immune response to an administered non-human antigen comprise administering a HMGB A box, a non-naturally-occurring HMGB A box.

Comprising a vertebrate HMGB A box, a non-naturally-occurring HMGB A conditional antigential an autoimmune disorder in an individual comprises administering an HMGB polypeptide comprising a vertebrate and a vertebrate or non-naturally-occurring HMGB box. The HMGB polypeptide is preferably a HMGBI peptide and may be truncated at the C-terminus. The autoimmune disease is allergy, ulcerative colitis, Crohn's disease, asthma, rheumatoid arthritis, sequence is that of the B box of human HMGBI protein ADY85326. ö 9 64 S NAPKRPPSAPFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMMNNTAADDKQPYEKKAAKLK 1 NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMWNNTAADDKQPYEKKAAKLK Gaps ; 0 ; Score 370; DB 9; Length 74; ; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                    The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of detecting an HMGB polypeptide in a sample. The antibody (or antigenbinding fragment) binds to a vertebrate HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated by activation of a proinflammatory cytokine from a vertebrate cell treated by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, postabis, pancreatitis, peritonitis, burns, ischemia, Behnet's disease, graft versus host disease, inflammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, arthritis, or lupus, and identical sequence is that of the A box of human HMGB1. An identical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMMNNTAADDXQPYEKKAAKLK 64

The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of control of an inflammatory cytokine cascade, and methods of control of control of an inflammatory cytokine cascade, and inhibits release of conditionally bind to non-A box epitopes of HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HWGB corporation. A method of treating a condition characterized by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritonitis, burns, ischemia, Behcet's disease, graft versus host disease, infilammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, arthritis, or lupus, and cachexia, especially sepsis, arthritis, or lupus. The present sequence is that of the A box of human HMGB1 ADY85012. An identical

```
The present invention relates to the use, especially in vitro, of nucleic acids encoding high mobility group proteins for the following processes: a magingenesis (including in a wound bed), neovascularization, transmyocardial revascularization, wound healing, epithelialization and healing in cases of tooth or bone implants. The sequences and their encoded protein are useful for treating a very wide range of diseases: (proliferation, athritis, endometriosis, histocytosis, psoriasis, rosacea, eruptive or cavernous haemangioma, tumours (especially melanoma, Kaposi sarcoma and basal cell carcinoma), haemorrhoids, atteriosclarosis, angina pectoria, ischaemia, infarction, infertility, wounds (including diabetic and other ulcers), also diseases associated with DNA damage, especially xeroderma pigmentosum, leather skin', skin cancers and ageing cosmetic treatment, especially as a sun-protection composition. Compounds cosmetic treatment, especially as a sun-protection composition. Compounds the protein and all the specified processes can also be used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      therapeutically. The present sequence is a polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; high mobility group box B box; HMGB; HMGB A box; HMGB B box; proinflammatory cytokine; weight loss; obesity; inflammation; inflammatory cytokine cascade; sepsis; allograft rejection; rheumatord arthritis; asthma; lupus; adult respiratory distress syndrome; chronic obstructive pulmonary disease; psoriasis; pancreatitis; peritonitis; burn; myocardial ischaemia; organic ischaemia; reperfusion ischaemia; Bahcet's disease; graft-versus-host disease; crohn's disease; ulcerative colitis; multiple sclerosis; cachexia.
HMGB B box; high mobility group; immune response; immunostimulation; cancer; human; high mobility group box 1; HMG1; cytokine activity; B box.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immunostimulation, and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual. The composition individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human high mobility group box I (HMGI) B box biologically active fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

The invention is based on the discovery that high mobility group box canning that a matigen, diminishes the antibody response to the administered antigen. HWGB1 has 2 DNA binding motifs, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HWGB polypeptide comprising a vertebrate HWGB A box, or an immunesuppressive fragment of the vertebrate or non-natural HWGB A box. The immune pathology is induced by the administration of a non-human antigen, non-capthology is induced by the administration of a non-human antigen, non-adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of individual, or by infection from a microorganism. Claimed methods of pathology in an individual or decreasing an immune pathology, inhibiting an immune pathology in an individual or decreasing an immune response to an administered non-human antigen comprise administering a HWGB A box, or an immunosuppressive fragment of the vertebrate or non-natural A box. A claimed method of treating an auto-maturally-occurring HWGB A comprises administering a HWGB polypeptide comprising a vertebrate HWGB A box, or an immunosuppressive fragment of these, and a vertebrate or non-naturally-occurring HWGB B box, and naminosuppressive fragment of these, and a vertebrate or non-naturally-occurring HWGB C box, and may allease is alleady, and a vertebrate or non-naturally-occurring HWGB C box, and mind may be a preferably a HWGBI peptide and may be considered at the C-terminus. The autoimmune disease is alleady, and a vertebrate or non-naturally-occurring HWGB become and may be an antifered at the C-terminus. The unifered and may be an antifered at the C-terminus. The unifered and may be an antifered at the C-terminus. The unifered at the C-terminus and a vertebrate or non-naturally-occurring HWGB perminus and a vertebrate or non-naturally-occurring and a vertebrate or non-naturally-occurring and a vertebrate or non-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMWNNTAADDKQPYEKKAAKLK 60
ulcerative colitis, antiinflammatory; antiulcer; gastrointestinal-gen.; Crohna disease; inflammation; asthma; antiashmatic; rheumatoid arthritis; antitheumatic; antiathritit; psoriasis; antipsoriatic; systemic lupus erythematosus; dermatological; antiulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5 NAPKRPPSAFFLFCSEYRPKIKGEHPGLSIGDVAKKLGEMMNNTAADDKQPYEKKAAKLK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  psoriasis or systemic lupus erythematosus (all claimed). The present sequence is that of the B box of human HMGB1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ulcerative colitis, Crohn's disease, asthma, rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100.0%; Score 370; DB 9; Length 92; larity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammentory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to non-B conceptionally bind to the HMGB B box but do not specifically bind to non-B conceptionally where the antibodies can inhibit release of a proinflammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obesity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the patient comprises administering composition and methods are useful in treating obesity and conditions characterised by activation of an useful in treating obesity and conditions characterised by activation of
                                                                                                                                                                                                                                                                                                                                                                                           New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        an inflammatory cytokine cascade, e.g. sepsis, allograft rejection, rheumatory cytokine cascade, e.g. sepsis, allograft rejection, chromatod arthritis, asthma, lugus, adult respiratory distress syndrome, peritonitis, burns, myocardial ischaemia, organic ischaemia, reperfusion ischaemia, Behcer's disease, graft-vereus-host disease, Crohn's disease, ulcerative colitis, multiple sclerosis or cachexia. This sequence represents a human HMGB B box polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              64

Qin S, Human HMGB1 A box WO2005026209-A2 Homo sapiens 16-JUN-2005 24-MAR-2005 Mus sp. Rattus sp. Newman W,

The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of detecting an HMGB polypeptide in a sample. The antibody (or antigenbinding fragment) binds to a vertebrate HMGB A box but does not specifically bind to non-A box epitopes of HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HMGB protein. A method of treating a condition characterized by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, penitonitis, burns, ischemia, Behcet's disease, graft versus host disease, inflammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, arthritis, arthritis, arthritise, present sequence is that of the A box of human HMGB1. An identical sequence is also found in rat and mouse HMGB1.

Prostate cancer associated gene sequences, referred to as prostate cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as prostate cancer

Claim 11; Page 2225-2226; 2338pp; English

proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunoamodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and prolliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present AAF15566 to AAF16505 encode the human prostate cancer associated

WPI; 2004-347921/32. N-PSDB; ACN39840 New tumor-associated antigenic target polypeptides and nucleic acids, useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian or prostate cancer or tumor.

Claim 12; SEQ ID NO 4238; 7273pp; English.

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide and polypeptides at least 80% identical to the TAT nucleic acids and polypeptides are sequences at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; a peptide or organic acid; an antibodies, antagonists, binding molecules and compositions for the treatment or diagnosing or treating a cell proliferative disorder associated with cincreased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, carvical cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, inver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 10

NSHUH2

nonhistore chromosomal protein HMG-2 - human
C)Species: Homo sapiens (man)
C,Date: 31-Mar-1992 #sequence revision 31-Mar-1992 #text_change 09-Jul-2004
C,Accession: A42425, S20061; $18068
R;Ahcession: A42425, S20061; $18068
R;Ahcession: A42425
A,Title: Structure of a gene coding for human HMG2 protein.
A,Feferance number: A42425, MUID:92202209; PMID:1551873
A,Recession: A42425
A,Molecule type: DNA
A,Residues: 2-209 <AHr
A,Residues: 2-209 <AHr

-! FUNCTION: Binds preferentially single-stranded DNA and unwinds double stranded DNA (By similarity).

-! SUBCELLULAR LOCATION: Nuclear (By similarity).

-! SIMILARITY: Belongs to the HMG1/HMG2 protein family.

-! SIMILARITY: Contains 2 HMG box DNA-binding domains.
                                                                                                                        10-MAY-2005 (Rel. 47, Created)
